

# World Class PID Sensors...

# Require World Class PID Lamps

- Choose your lamp to:
- Increase longevity and reduce long term costs
  - Control initial purchase costs

## Coated VUV Lamp

- Average life-span ~ 2 years
- Longer life than conventional VUV lamps
- Unique coating prevents release of impurities into working media
- Consistent ignition

- No-getter needed, eliminates ion sputtering and avoids secondary contamination
- Exhibits minimal attenuation of intensity during extended operation

**Very Long Life** ↗ ↖ **Ultra Long Life**

## Ceramic Body VUV Lamp

- Average service life exceeds 3 years
- The world's first 6mm-diameter ceramic VUV lamp
- Fully automated production ensures exceptional consistency
- High spectral purity => Consistent response factors
- Superior ultraviolet output intensity
- Resists VUV radiation, eliminates both ion sputtering and liberation of impurities

Applications Uniques Taiwan LTD.
